

# RELEASE NOTES

for

## BRASS-TRUSS™ Version 2.2

May 2016

---

### General

The BRASS™ incident tracking system can be found at [www.wydot-brass.com](http://www.wydot-brass.com). Users without an account on the incident tracking system can request an account by clicking on the "Open a Technical Support Account" link/button and e-mailing the address or calling the phone number listed. A username and password will be created and sent to the user. All BRASS™ technical support questions should be logged in this system.

### Program Maintenance

The following issues were addressed for this release. The incident number is listed in parentheses after each issue if applicable.

### Maintenance

- Updated the GUI to Visual Studio 2013. (858)
- Updated the integration modules for AASHTOWare Bridge to Visual Studio 2013. (867)

### Bug Fixes

- Added a note to the output to clarify that a wheel fraction is double the distribution factor. (741)
- Revised the GUI to delete temporary files, so an analysis can be run more than one time without closing the GUI. (891)
- Corrected some rating factor calculations so the sign of the allowable stress and the resistance matched. Previous negative rating factors are now reported as positive values. (1048)
