

WYOMING

VULNERABLE ROAD USERS CRITICAL CRASH REPORT

2020 - 2024

An annual publication provided by the

Wyoming Department of Transportation
Highway Safety Program
5300 Bishop Blvd.
Cheyenne, WY 82009-3340

August 2025

The data contained within this report will be accurate and current at the time of publication. Data may be subject to change.

Mark Gordon
Governor

WYOMING Department of Transportation

"Provide a safe and effective transportation system"

5300 Bishop Boulevard, Cheyenne, Wyoming 82009-3340

Darin J. Westby, P.E.
Director

August 25, 2025

Dear Reader,

Wyoming's Vulnerable Road Users Critical Crash Report has been published for your information. This report provides information on traffic crashes occurring on public roadways in the state of Wyoming involving pedestrians and/or pedalcyclists. The publication contains basic crash information as well as information for popular areas of interest, such as the basic demographics of the people involved, data on when and where crashes are occurring, and potential contributing factors.

If you require further information, or if you have any questions, comments, or suggestions about the report, please contact the Highway Safety Program at the address below.

Safety Management Engineer

BACKGROUND INFORMATION

Purpose

Pedestrians and pedalcyclists are vulnerable road users due to their high risk of injury if struck by a motor vehicle. They have little or no protection to absorb and diffuse the transfer of energy created at impact, which is why pedestrians and pedalcyclists experience a higher proportion of fatal and suspected serious injuries when a crash occurs. An increase in vulnerable road user crashes is a rising concern nationwide.

Wyoming vulnerable road user critical crash analysis is completed and published annually in order to provide useful information about critical crashes that have occurred over the previous five-year period on public roadways in Wyoming. The severity level of a crash is determined by the most severe injury resulting from the crash, with critical crashes including all crashes with a fatal or suspected serious injury.

This report provides concerned citizens and safety partners (including roadway engineers, law enforcement agencies, non-profit organizations, and other safety professionals) with more detailed crash and injury information on the vulnerable road user safety focus area (area of primary focus for critical crash prevention treatment). The crash data provided in this publication may help identify safety problem areas to target for improvement, including the locations and populations affected. It also enables readers to track the progress of identified safety problem areas. Understanding where safety needs are greatest will help the Wyoming Department of Transportation (WYDOT) and its safety partners focus available funds on the most effective crash reduction projects and injury prevention programs.

Explanation of the Wyoming Vulnerable Road Users Critical Crash Report

For ease of analysis, the crash information presented in this report is divided into five (5) sections.

Basic Crash Information provides an overview of statewide crash data and vulnerable road user crash data for comparative purposes. This includes total crash and involved counts, as well as a five-year average critical crash comparison chart.

People Involved provides counts and more detailed information for drivers, pedestrians, and pedalcyclists directly involved in a critical crash with groupings based on gender, age, and injury status.

When Crashes are Occurring provides counts and more detailed information by vulnerable road user person type on when critical crashes are occurring with groupings by month, day of the week, hour of the day, and lighting conditions.

Where Crashes are Occurring provides counts and more detailed information by vulnerable road user person type on where critical crashes are occurring with groupings by location and various roadway descriptions, features, and circumstances.

Potential Contributing Factors provides counts and more detailed information for drivers, pedestrians, and pedalcyclists on potential contributing factors leading up to the crash with groupings by various types of conditions or circumstances present at the location of the crash and risky behaviors identified as putting roadway users at risk of property damage and injury.

Key Concepts

Fatality – A person who dies as the result of a traffic crash; the individual must have died within 30 days of the crash due to injuries sustained in the crash.

Injury – Bodily harm to a person (even a hint of a complaint of pain, bruise, or nausea) as a result of a crash that does not result in death.

Vulnerable Road User – A person considered to be at high risk of injury if struck by a motor vehicle.

Pedalcycle – A non-motorized vehicle propelled by pedaling.

Pedalcyclist – Any person directly involved in a crash who is an occupant of a pedalcycle in-transport.

Pedestrian – Any person directly involved in a crash who is not an occupant of a motor vehicle or pedalcycle.

CRASH SEVERITY – Based on the most severe injury resulting from the crash.

Fatal Crash – A traffic crash involving one or more persons who sustained an injury resulting in death within 30 days of the crash and as a result of the crash.

Injury Crash – A traffic crash involving one or more persons who were injured but there were no fatalities.

Property Damage Only (PDO) Crash – A traffic crash involving property damage of \$1,000 or more with no apparent injuries or fatalities.

INJURY STATUS – The injury classification for each person directly involved in the crash.

Fatal Injury – Any injury that results in death within a 30 day period after the crash occurred.

Suspected Serious Injury – Any injury, other than a fatal injury, that prevents the injured person from walking, driving or normally continuing the activities the person was capable of performing before the injury occurred. It is often defined as “needing help from the scene.”

Suspected Minor Injury – Any injury, other than a fatal or serious injury, which is evident to observers at the scene of the crash in which the injury occurred. Examples: contusions (bruises), laceration, bloody nose.

Possible Injury – A complaint of pain without visible injury.

No Apparent Injury – No physical evidence of injury and person does not report any changes in normal function.

CRASH CATEGORIES

Critical Crash – Critical crashes include all fatal and serious injury crashes.

Serious Crash – Serious crashes include all suspected minor injury and possible injury crashes.

Damage Crash – Damage crashes include all no apparent injury and unknown injury crashes.

BASIC CRASH INFORMATION

PREVALENCE OF VULNERABLE ROAD USER INVOLVED CRITICAL CRASHES

ALL VULNERABLE ROAD USER INVOLVED CRITICAL CRASHES

WHEN CRASHES ARE OCCURRING

Pedestrian Involved Critical Crashes by Month

Pedalcyclist Involved Critical Crashes by Month

Vulnerable Road User Involved Critical Crashes by Month

Pedestrian involved critical crashes are more dispersed throughout the year likely due to two factors:

- 1) "Walking" is considered more of a year round activity as compared to cycling;
- 2) "Pedestrian" goes beyond persons traveling from one location to another via non-motorized means. The pedestrian classification includes people who are not primarily engaged in a traveling pursuit, such as people in the process of entering or exiting a motor vehicle, stranded motorists outside of the motor vehicle, people working in or along the roadway, even people located in a building.

Traditionally, summer months tend to have more vulnerable road user involved crashes. During the most recent five-year period 31.9% of all vulnerable road user crashes occurred in the months of June through August. Summer months account for 25.9% of pedestrian involved crashes and 60.7% of pedalcyclist involved crashes.

Inclement weather months account for a significant number of vulnerable road user involved crashes. During the most recent five-year period 49.7% of all vulnerable road user crashes occurred in the months of October through March, accounting for 56.3% of pedestrian involved crashes and 17.9% of pedalcyclist involved crashes. The high number of pedestrian involved crashes during this time period is likely linked to prior motorists involved in winter weather related crashes.

Pedestrian Involved Critical Crashes by Day of the Week

Pedalcyclist Involved Critical Crashes by Day of the Week

Vulnerable Road User Involved Critical Crashes by Day of the Week

Vulnerable road user involved critical crashes are relatively evenly dispersed throughout the days of the week with no particular day having a significantly higher number of crashes.

During the most recent five-year period, pedestrian involved crashes were slightly less than average on Tuesday, whereas pedalcyclist involved crashes were above average on this day of the week.

Pedestrian Involved Critical Crashes

By Hour of the Day

Pedalcyclist Involved Critical Crashes

By Hour of the Day

Vulnerable Road User Involved Critical Crashes By Hour of the Day

Crash data for the most recent five-year period shows there may be slight spikes in vulnerable road user involved crashes during the morning commute and midday, and a significant spike during the evening commute.

Urban Pedestrian Involved Critical Crashes by Lighting

Rural Pedestrian Involved Critical Crashes by Lighting

Urban Pedalcyclist Involved Critical Crashes by Lighting

Rural Pedalcyclist Involved Critical Crashes by Lighting

Urban Vulnerable Road User Involved Critical Crashes by Lighting

Rural Vulnerable Road User Involved Critical Crashes by Lighting

While the majority of vulnerable road user involved critical crashes occur during daylight conditions (60.1%), a significant number occur in darkness conditions (35.6%) with nearly 25.2% occurring in darkness unlighted conditions.

The vast majority of vulnerable road user involved critical crashes that occurred in darkness conditions were pedestrian involved (94.8%), with most occurring in darkness unlighted conditions (67.2%). Approximately 67% of the pedestrian involved critical crashes that occurred in darkness conditions were urban, with 60.5% of these being darkness unlighted conditions. The vast majority of rural pedestrian involved critical crashes occurring in darkness conditions were in darkness unlighted conditions (94.1%).

WHERE CRASHES ARE OCCURRING

Urban vs Rural Pedestrian Involved Critical Crashes

Urban Pedestrian Involved Critical Crashes by Severity

■ FATAL INJURY 22.0%
■ SUSPECTED SERIOUS INJURY 78.0%

■ SUSPECTED SERIOUS INJURY 45.7%
Total: 100.0%

Urban vs Rural Pedalcyclist Involved Critical Crashes

Urban Pedalcyclist Involved Critical Crashes by Severity

Rural Pedalcyclist Involved Critical Crashes by Severity

Urban vs Rural Vulnerable Road User Involved Critical Crashes

Urban VRU Involved Critical Crashes by Severity

Rural VRU Involved Critical Crashes by Severity

The majority of vulnerable road user involved critical crashes occurred in an urban environment (76.7%), including 74.1% of pedestrian involved critical crashes and 89.3% of pedalcyclist involved critical crashes.

While the majority of vulnerable road user involved critical crashes occurred in an urban environment, rural vulnerable road user involved critical crashes had a significantly higher crash severity with 50% of rural critical crashes resulting in a fatal injury compared to 21.6% of urban vulnerable road user involved critical crashes. All rural vulnerable road user involved fatal injury crashes were pedestrian involved, which accounted for 54.3% of rural pedestrian involved critical crashes.

GLOSSARY OF TERMS

Alcohol-Involved – Law enforcement documented at least one driver or non-motorist involved in the crash had used alcohol, or alcohol use was suspected and test results are pending/unknown. Any amount of alcohol indicated by testing qualifies as alcohol involved.

Blood Alcohol Concentration (BAC) – The percent of alcohol in a person's blood stream. In Wyoming, a person is legally intoxicated if they have a BAC of 0.08% or higher.

Critical Crash – All fatal and suspected serious injury crashes.

Distracted Driving – Driving while engaging in any activity that diverts attention away from the task of safe driving.

Drug-Involved – Law enforcement documented at least one driver or non-motorist involved in the crash had used drugs, or drug use was suspected and test results are pending/unknown.

Fatal Injury – Any injury that results in death within a 30 day period after the crash occurred.

Intersection – An area containing the crossing or connection of two or more traffic ways within the lateral curb/boundary lines of the traffic ways.

Motorist – Any occupant of a motor vehicle.

Non-Motorist – Any person involved in the crash who was not an occupant of a motor vehicle.

Pedalcycle – A non-motorized vehicle powered solely by pedaling.

Pedalcyclist – A person using a non-motorized vehicle powered solely by pedaling who is directly involved in the crash. This includes riders of bicycles, tricycles, unicycles, and pedal cars.

Pedestrian – Any person who is not an occupant of a motor vehicle or pedalcycle who is directly involved in the crash.

Risky Behavior – Acts or decisions that increase the risk of injury to oneself and/or others and increase the likelihood of causing damage.

Rural – Located outside the corporate limits of any incorporated city or town.

Safety Focus Area – An area of focus for critical crash prevention treatment and/or education programs that has been identified as an area of concern based on the number of critical crashes associated with the particular location/subject.

Suspected Serious Injury – Any injury, other than a fatal injury, that prevents the injured person from walking, driving or normally continuing the activities the person was capable of performing before the injury occurred. It is often defined as “needing help from the scene.”

Speed-Related – At least one driver/vehicle directly involved in the crash was exceeding the speed limit, racing, or their speed was too fast for the current conditions.

Traffic Control Device – Markers, signs, and signal devices used to inform, guide, and control traffic, including motor vehicles, pedestrians, and bicyclists.

Urban – Located within the corporate limits of an incorporated city or town.

Vulnerable Road User – A person considered to be at high risk of injury if struck by a motor vehicle due to little or no protection to absorb and diffuse the transfer of energy created at impact.

Work Zone – A temporary roadway environment where construction, maintenance, or utility work activities are taking place. Work zones are usually clearly marked and extend from the first warning sign or flashing lights on a work vehicle to the “End of Work” sign or last traffic control device. The work zone can be long-term, short-term, or mobile.

APPENDIX

ROAD FUNCTION CLASSIFICATIONS

The U.S. DOT's Federal Highway Administration (FHWA) classifies our Nation's urban and rural roadways by road function. Each function class is based on the type of service the road provides to the motoring public, and the designation is used for data and planning purposes. Roadway design standards are tied to function class with each class having a range of allowable lane widths, shoulder widths, curve radii, etc. There are three major road function classifications and the amount of mobility and land access offered by these road types differs greatly.

Roads are first divided into rural or urban location, then one of the following classifications:

ARTERIALS

Arterials serve the longest distances with the fewest access points and facilitate the highest speed limits. Four functional classifications are included in the arterial category:

Interstates are the highest classification of roadways in the United States. These arterial roads provide the highest level of mobility and the highest speeds over the longest uninterrupted distance. Interstates have directional travel lanes that are usually separated by a physical barrier. Interstates nationwide usually have posted speeds between 55 and 75 MPH.

Other Freeways and Expressways are similar to interstates with directional travel lanes that are usually separated by a physical barrier. These arterial roads offer a high level of mobility with high speeds over long distances with limited access points that supplement the Interstate System. Freeways and Expressways usually have posted speeds between 55 and 70 MPH.

Other Principal Arterials include multilane highways and other important roadways that supplement the Interstate System. They connect, as directly as practicable, the Nation's principal urbanized areas, cities, and industrial centers. Posted speed limits on arterials usually range between 50 and 65 MPH.

Minor Arterials, the lowest arterial classification, provide service for trips of moderate length and offer connectivity to the higher arterial classifications.

COLLECTORS

Collectors serve the critical roles of gathering traffic from local roads and funneling vehicles into the arterial network. Collectors provide less mobility than arterials at lower speeds and for shorter distances. They balance mobility with land access. The posted speed limit on collectors is usually between 35 and 55 MPH. Although subtly different, two classifications are included in the collector category:

Major Collectors are longer, have fewer points of access, have higher speed limits, and can have more travel lanes.

Minor Collectors are all remaining collectors not classified as major collectors, and are usually more focused on access than mobility.

Local Roads provide limited mobility as they are not intended for use in long-distance travel, except at the origination or termination of a trip. They provide primary access to residential areas, businesses, farms, and other local areas and are often designed to discourage through traffic. Local roads, with posted speed limits usually between 20 and 45 MPH, are the majority of roads in the U.S.

BLOOD ALCOHOL CONCENTRATION (BAC) INFORMATION

The concentration of alcohol in the blood (blood alcohol concentration - BAC) and the effects the level of BAC may have on an individual varies based a variety of factors, including body type and tolerance. However, BAC can be used as a guide to predict how an individual may be effected. Based on the National Highway Traffic Safety Administration's "The Effects of Blood Alcohol Concentration" chart, the typical effects an individual may experience based on level of BAC are:

Blood Alcohol Concentration (BAC) in G/DL	Typical Effects	Predictable Effects on Driving
.02	Some loss of judgement; relaxation, slight body warmth, altered mood.	Decline in visual functions and in ability to perform two tasks at the same time.
.05	Impaired judgement, lowered alertness, may have loss of small-muscle control (e.g. focusing your eyes). This is usually accompanied by a good feeling, release of inhibition, and exaggerated behavior.	Reduced coordination, reduced ability to track moving objects, difficulty steering, reduced response to emergency driving situations.
.08 (legal limit of intoxication)	Muscle coordination becomes poor (e.g. balance, speech, vision, reaction time, and hearing), harder to detect danger; judgement, self-control, reasoning, and memory are impaired.	Concentration and short-term memory loss, reduced information processing capability, impaired perception and speed control.
.10	Clear deterioration of reaction time and control, slurred speech, poor coordination, and slowed thinking.	Reduced ability to maintain lane position and brake appropriately.
.15	Far less muscle control than normal, vomiting may occur, major loss of balance.	Substantial impairment in vehicle control, attention to driving, and in visual and auditory information processing.
.25 - .35	Severe intoxication. Need assistance walking. Likely to experience mental confusion/distress, nausea and vomiting.	
.36 and higher	Loss of consciousness may occur. At a BAC of .40 a coma is likely. May lead to respiratory failure and death.	

In Wyoming, drivers with a blood alcohol concentration (BAC) of 0.08% or higher are considered alcohol-impaired by law. For commercial motor vehicle drivers, 0.04% is the legal limit of intoxication.

Non-Collision

- 01 - Overturn/Rollover
- 02 - Fire/Explosion
- 03 - Immersion
- 04 - Jackknife
- 05 - Cargo/Equipment Loss or Shift
- 06 - Equipment Failure
- 07 - Separation of Units
- 08 - Ran Off the Road Right
- 09 - Ran Off the Road Left
- 10 - Cross Median
- 74 - Cross Centerline
- 11 - Downhill Runaway
- 12 - Fell/Jumped from a MV
- 13 - Thrown or Falling Object
- 14 - Avoiding an Object on Road
- 15 - Avoiding an Animal on Road
- 16 - Carbon Monoxide (CO) Poisoning
- 17 - Injuries by being thrown against part of vehicle
- 18 - Other Non-Collision (MC Loss of Control)

Collision w/ Person, MV, or Non-Fixed Object

- 19 - Pedestrian
- 20 - Pedacycle
- 21 - Railway Vehicle
- 22 - Motor Vehicle in Transport on Roadway
- 23 - Motor Vehicle in Transport on OTHER Roadway
- 24 - Parked Motor Vehicle
- 25 - Struck by Falling, Shifting Cargo or Anything Else Set in Motion by Motor Vehicle (Multi Vehicle Crash)
- 26 - Other NON-Fixed Object
- 27 - Work Zone/Maintenance Equipment
- 28 - Work Zone Channeling Device
- 29 - Object Set in Motion by Another Vehicle (Single Vehicle Crash)

Animals

- 30 - Horse
- 31 - Cow
- 32 - Pig
- 33 - Sheep
- 34 - Other Domestic (Dog, Llama, ...)
- 35 - Elk
- 36 - Deer
- 37 - Moose
- 38 - Antelope
- 39 - Buffalo
- 40 - Other Wild

Collision w/ Fixed Object

- 41 - Guardrail End
- 42 - Guardrail Face
- 43 - Impact Attenuator/Crash Cushion
- 44 - Bridge Pier or Support
- 45 - Bridge Overhead Structure
- 46 - Bridge Rail
- 47 - Concrete Traffic Barrier/Jersey Barrier
- 48 - Other Traffic Barrier (Includes temporary)
- 49 - Utility Pole/Light Support
- 50 - Traffic Signal Support
- 51 - Traffic Sign Support
- 52 - Overhead Traffic Sign
- 53 - Sign Support Single Post
- 54 - Sign Support Multiple Post
- 55 - Other Traffic Sign Support
- 56 - Barricade
- 57 - Tree/Shrubbery
- 58 - Cut Slope
- 59 - Road Approach
- 60 - Rock, Boulder, Rock Slide
- 61 - End of Drainage Pipe/Structure/Culvert
- 62 - Building or Other Structure Wall
